

PARALLEL SESSION ON COMPLIANCE AND SUSTAINABLE DEVELOPMENT FOR GLOBAL MANUFACTURING

【Basic Information】

Moderator:

Li Wei Vice Director-General of the Department of Industrial Policy and Regulations, MIIT

Opening Remarks:

Xiong Jijun Vice Minister, MIIT

KASIMOV Ilzat Ablakhatovich Deputy Minister of Investment, Industry and Trade

Zhang Ying Deputy Secretary General of the Shanghai Municipal People's Government

Guest Speeches:

LiYizhong President of the China Federation of industrial Economics, Former Minister of the Ministry of Industry and Information Technology

Wang Yiming Vice Chairman of CCIEE, Former Vice President(Vice Minister) of DRC

Zhao Dong Board Director and President, China Petrochemical Corporation

Li Jiancheng Deputy Director-General, Department of Industry and Information Technology of Jiangsu Province

Yin Tongyue Chairman of Chery Automobile Co., Ltd

Roundtable Forum:

Wang Xiaoguang Director of the Sustainable Development Department of the China Federation of Industrial Economics, and President of the Beijing Rongzhi Corporate Social Responsibility Institute

Mao Liuping Deputy Director General, Department of Industry and information Technology of Hunan Province

Linda Kromjong

Amfori President

Ma Qing

Executive Vice President, Siemens Greater China

Ting Kwok

To(Hong Kong, China) Chief Operating Officer of HKQAA

Yu Zhihong

President and Editor-in-Chief of China Sustainability Tribune

【Brief Introduction】

Compliance and Sustainable Development for Global Manufacturing, as one of the parallel sessions of the 8th Hongqiao International Economic Forum, was held in Hall C1, Hall 4.2, National Exhibition and Convention Center (Shanghai) on the morning of November 6, 2025. This conference is hosted jointly by MIIT and MOFCOM, and organized by the China Federation of Industrial Economics. It consists of six sections: leadership remarks session, outstanding practice sharing session, guest speeches, public legal service demonstration session, roundtable forum, and publicity and outcome presentation. Among them, there are no speakers in the three sections of outstanding practice sharing session, public legal service demonstration session, and publicity and outcome presentation. This parallel session focused on the hot topics related to compliance promoting sustainable development in the global manufacturing industry's development process, conducting on-site exchanges. It discussed hot topics such as global industrialization and compliance for going global, and shared and showcased the achievements of industrial and information technology rule of law and compliance construction in serving the win-win development of the global manufacturing industry.

[Opening Remarks]

At the guest speech session, Xiong Jijun, vice minister of MIIT, KASIMOV | Ilzat Ablakhatovich Deputy Minister of Investment, Industry and Trade, and Zhang ying, deputy secretary general of the Shanghai Municipal People's Government were invited. The guests exchanged views on the core significance, current development status, future prospects and practices of various countries regarding compliance and the sustainable development of the global manufacturing industry. Manufacturing is a vital pillar of the national economy. As an important guarantee for Chinese-style modernization, the rule of law plays a fundamental role in promoting high-quality development of manufacturing, stabilizing expectations and benefiting the long term. In recent years, through improving industry legislation, standardizing administrative law enforcement, and strengthening enterprises' compliance and self-discipline, the level of industry governance has significantly improved, and irrational competition has been effectively curbed. The global manufacturing industry is currently undergoing major changes unseen in a century. The technological revolution and industrial transformation are developing in depth, and the international economic and trade rules system urgently needs to be reshaped. It is necessary to strengthen legislation in key areas, improve the legal and regulatory system, perfect compliance standards, enhance industry governance capabilities, and through deepening international cooperation, jointly create a market-oriented, law-based and internationalized business environment. All countries should uphold the principles of transparency and mutual trust, and promote the in-depth integration of industrial and supply chains through policy coordination, mutual recognition of standards and joint construction of projects. In practice, international cooperation covers areas such as green energy, transportation infrastructure, and digital governance. Bilateral trade and investment have achieved fruitful results, injecting new impetus into regional economic development. Representatives from Dongdao City shared their practices of enhancing enterprises' compliance capabilities through institutional innovation, digital empowerment and international services, such as implementing AEO certification, building enterprise digital service platforms, conducting compliance publicity and talent cultivation, etc. The aim is to provide precise and inclusive compliance support for enterprises and facilitate the intelligent, green and integrated development of the manufacturing industry.

Xiong Jijun, vice minister of MIIT, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and delivered a speech

KASIMOV Izat Ablakhatovich, deputy minister of Investment, Industry and Trade, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and delivered a speech

Zhang Ying, deputy secretary general of the Shanghai Municipal People's Government, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and delivered a speech

[Guest Speeches]

During the guest speech session, Li Yizhong, president of the China Federation of Industrial Economics, former minister of the Ministry of Industry and Information Technology, Wang Yiming, vice chairman of CCIEE, former vice president(vice minister) of DRC, Zhao Dong, board director and president, China Petrochemical Corporation, Li Jiancheng, deputy director-general, department of Industry and Information Technology of Jiangsu Province, and Yin Tongyue, chairman of Chery Automobile Co., Ltd were invited. The guests engaged in in-depth discussions on the reconstruction of the global industrial chain, enterprise compliance, future prospects and international practices. At present, the global industrial chain and supply chain are at a critical stage of reconstruction and reshaping. Affected by the fluctuations of economic globalization, changes in international rules and domestic structural factors, the manufacturing industry needs to enhance its resilience and security by supplementing, consolidating and strengthening the industrial chain. Economic globalization is an inevitable historical trend. Bilateral, multilateral and regional cooperation has become an important approach. Compliance operation is the foundation for enterprises to integrate into the global industrial chain in this process. Special attention should be paid to four major areas: market opening, intellectual property protection, labor rights and interests, and green and low-carbon development. Market opening requires breaking monopolies, promoting fair competition and building a unified national market. Intellectual property protection requires strengthening the rule of law, cracking down on infringement, and enhancing the ability of enterprises to transform their innovation achievements. The protection of workers' rights and interests involves working conditions, income distribution and safety and health, and is an important indicator of achieving sustainable development. The green and low-carbon transformation requires an active response to international carbon rules, accelerating the mutual recognition of carbon footprint accounting and standards, and promoting the ecological development of industries. Looking ahead, institutional opening up has become a new direction. Multiple fields such as property rights, subsidies, the environment, and labor need to actively align with international high-standard economic and trade rules and adapt to new international regulations through deepening internal reforms. When enterprises go global, they need to shift from profit-driven competition to value creation, from passive response to proactive layout, and from formal compliance to substantive compliance. They should enhance their compliance management capabilities by improving organizational structure, institutional systems, operational mechanisms, management culture and resource input. At the international practice level, enterprises have achieved global industrial chain layout and win-win development in fields such as hydrogen energy, new energy vehicles, and high-end manufacturing through technological cooperation, standard co-construction, and local operation.

Li Wei, vice director-general of the Department of Industrial Policy and Regulations of MIIT, hosted the parallel session on "Compliance and Sustainable Development for Global Manufacturing"

Li Yizhong, president of the China Federation of Industrial Economics and former minister of the Ministry of Industry and Information Technology, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and delivered a keynote speech

Wang Yiming, vice chairman of CCIEE, former vice president(vice minister) of DRC, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and delivered a keynote speech

Zhao Dong, board director and president of China Petrochemical Corporation, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and delivered a keynote speech

Li Jiancheng, deputy director-general of department of Industry and Information Technology of Jiangsu Province, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and delivered a keynote speech

Yin Tongyue, chairman of Chery Automobile Co., Ltd, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and delivered a keynote

["Compliance and Industrial Globalization" seminar]

The "Compliance and Industrial Globalization" seminar invited speakers including Wang Xiaoguang, director of the sustainable development department of the China Federation of Industrial Economics, and president of the Beijing Rongzhi Corporate Social Responsibility Institute, Mao Liuping, deputy director general of department of Industry and Information Technology of Hunan Province, Linda Kromjong, Amfori President, Ma Qing, executive vice president of Siemens Greater China, Ting Kwok To (Hong Kong, China), Chief Operating Officer of HKQAA, and Yu Zhihong, president and Editor-in-Chief of China Sustainability Tribune. The discussions focused on building a compliance ecosystem, sustainable development governance practices, and addressing global challenges. In terms of compliance ecosystem construction, compliance has become a core element of sustainable development in the manufacturing industry amid the reshaping of global supply chains. Systematic efforts such as improving international logistics channels, establishing cross-border service platforms, deepening legal services for supply chains, and enhancing vocational skills training are needed to boost supply chain efficiency and resilience. Compliance is not a cost but an investment, and it should serve as a "common language" for global supply chains, fostering mutual trust through mutual recognition of standards, risk alerts, and ongoing dialogue. Enterprises must transform compliance requirements from passive responses into drivers of innovation. Regarding sustainable development governance practices, clear environmental, social, and governance (ESG) objectives should be set, a matrix-based management system established, and low-carbon and digital coordination across supply chains promoted. Through technological empowerment and ecosystem collaboration, SMEs can overcome compliance bottlenecks such as carbon accounting and data compatibility, achieving cost reduction, efficiency gains, and brand enhancement. Enterprise compliance also needs to evolve from "rule-based" to "technology-driven" governance, optimizing control mechanisms to raise frontline employees' compliance awareness while deeply integrating ESG requirements with financial disclosures to align with green finance standards. In addressing global challenges, Chinese enterprises have transitioned from rule learners to practice leaders in globalization, now facing four new challenges: intelligent rules, green trade standards, inclusive and equitable requirements, and transparent information disclosure. By leveraging professional institutions, compliance management should be elevated from basic compliance to strategic integration. Through policy coordination, joint industrial park development, and talent cultivation mechanisms, an inclusive and sustainable new ecosystem for global manufacturing can be built.

Mao Liuping, deputy director general of department of Industry and information Technology of Hunan Province, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and participated in the discussions

Linda Kromjong, Amfori President, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and participated in the discussions

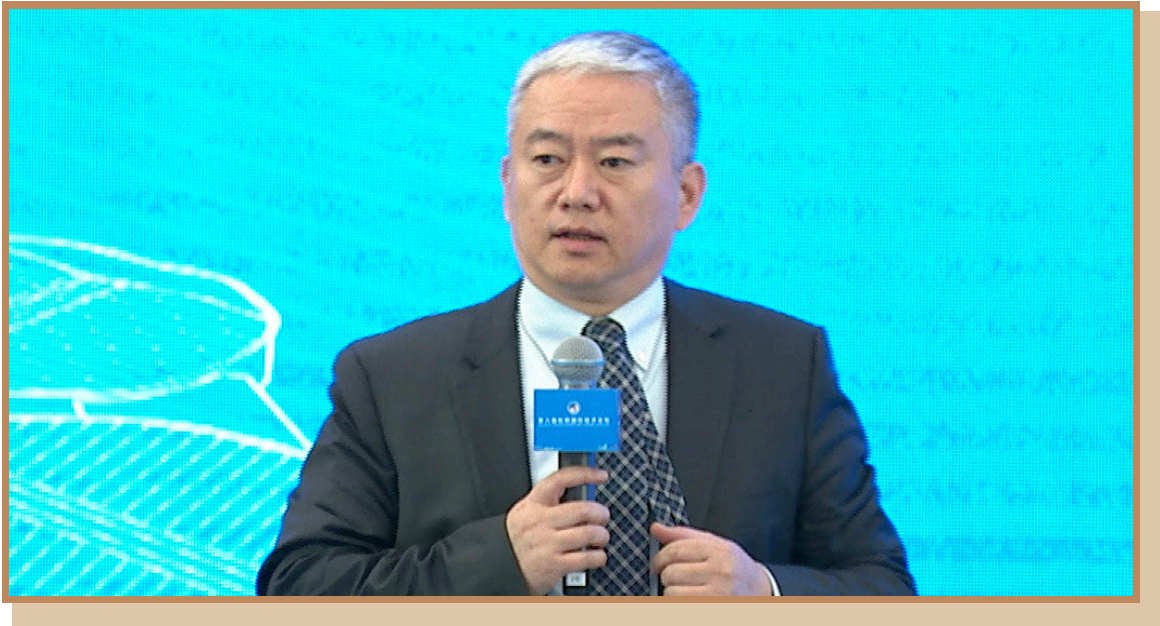

Ma Qing, executive vice president of Siemens Greater China, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and participated in the discussions

Ting Kwok To(Hong Kong,China), Chief Operating Officer of HKQAA, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and participated in the discussions

Yu Zhihong, president and Editor-in-Chief of China Sustainability Tribune, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and participated in the discussions

Wang Xiaoguang, director of the Sustainable Development Department of the China Federation of Industrial Economics, attended the parallel session on "Compliance and Sustainable Development for Global Manufacturing" and participated in the discussions
