

Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind

【Basic Information】

Hosts:

Keynote Presentation and

Achievement Release:

Zhou Liang

Secretary of the Party Committee
and Chief Editor of Economic Information Daily

Interactive Discussion:

Wang Xiaobo

Editorial Board member of Economic Information Daily, Director
of Xinhua Health Platform

Address:

Sun Chenghai

Secretary of the Party Committee and Deputy Director General of CIIE Bureau,
Chairman, National Exhibition and Convention Center (Shanghai) Co., Ltd.

Keynote speeches:

Bi Jingquan

Vice Chairman of the 13th National Committee of the Chinese People's Political
Consultative Conference's Committee on Economic Affairs, Executive Vice Chairman
of China Center for International Economic Exchanges

Avram Hershko

2004 Nobel Laureate in Chemistry, Member of Israel Academy of Sciences and Humanities,
Foreign academician of Chinese Academy of Sciences (CAS)

Zhang Boli

Academician of Chinese Academy of Engineering, Winner of National Honorary Title
of "People's Hero" in 2020

Lin Guoqiang

Academician of Chinese Academy of Sciences(CAS), Dean of Innovation Research
Institute of Traditional Chinese Medicine of Shanghai University of Traditional Chinese
Medicine

Fu Fan

Executive Director and President of CPIC Group

Achievement Release:

Feng Shizheng

Professor and Dean of School of Sociology and Population Studies of Renmin
University of China

Alliance Establishment:

Inauguration Ceremony of China-Central Asia Health Industry Alliance

Interactive Discussion:

| | |
|-------------------|---|
| Lin Guoqiang | Academician of Chinese Academy of Sciences(CAS), Dean of Innovation Research Institute of Traditional Chinese Medicine of Shanghai University of Traditional Chinese Medicine |
| Leon Wang | Executive Vice President of AstraZeneca Group |
| Greg Holman | President of Stryker China |
| Kent Bradley | Chief Health and Nutrition Officer of Herbalife Nutrition |
| Wu Xiaobin | BeiGene Global President and Chief Operating Officer |
| Dechao Michael Yu | Chairman and Chief Executive Officer of Innovent |

【Introduction】

The 5th Hongqiao International Economic Forum's Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind, hosted by the Ministry of Commerce of the People's Republic of China and organized by Hongqiao International Economic Forum Secretariat and Economic Information Daily (Xinhua Health Platform), was held in the National Exhibition and Convention Center (Shanghai) on the afternoon of November 5, 2022. The Parallel Session, moderated by Zhou Liang, Host, Secretary of the Party Committee and Chief Editor of Economic Information Daily, served as a venue for constructive dialogues on promoting the inclusive and sustainable development of the world and building a global community of health for all by consolidating the global public health governance system. At the event, government officials, experts, academicians and enterprise representatives from both at home and abroad conducted in-depth discussions on various topics, including the reforms to the global public health governance system, the promotion of the high-quality development of the health industry and the role of youth in developing the national health system and promoting sustainable economic and social development. Mainstream media agencies, including Xinhua News, China Central Television, China National Radio, Guangming Daily and Economic Information Daily, gave live coverage of the high-profile industry event.

【Address】

Sun Chenghai, Secretary of the Party Committee and Deputy Director General of CIIE Bureau, Chairman, National Exhibition and Convention Center (Shanghai) Co., Ltd., attended and addressed the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai.

Sun Chenghai, Secretary of the Party Committee and Deputy Director General of CIIE Bureau, Chairman, National Exhibition and Convention Center (Shanghai) Co., Ltd., stressed that serving the functions of both exhibition and meeting, the CIIE has thoroughly implemented and actively promoted the strategy of building a Healthy China. During the event, enterprises hold their commercial exhibitions mainly oriented to the huge domestic market, setting up their exhibition areas for medical devices and healthcare services, operating special booths for public health, epidemic prevention and control, and the rehabilitation and care for the elderly, and launching their new products, technologies and services to benefit people's health, while the parallel forums have focused on delving into related topics on health economics, trying to contribute more "Hongqiao Wisdom" to building a health community for all by pooling the wisdom and efforts from all.

【Keynote Speeches】

Bi Jingquan, Vice Chairman of the 13th National Committee of the Chinese People's Political Consultative Conference's Committee on Economic Affairs, Executive Vice Chairman of China Center for International Economic Exchanges, attended the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and giving a keynote presentation.

Bi Jingquan, Vice Chairman of the 13th National Committee of the Chinese People's Political Consultative Conference's Committee on Economic Affairs, Executive Vice Chairman of China Center for International Economic Exchanges, pointed out that accelerating the high-quality development of the medical and health industry is of great significance to improving people's wellbeing, realizing the Chinese modernization and building a global community of health for all. As a result, we should support original R&D and rolling-out of better drugs with higher clinical efficacy, quickly establish a multi-layered medical security system, increase investments in basic research, expand international cooperation and promote continuous innovation in biomedicine so as to achieve high-quality development of the industry.

Avram Hershko, 2004 Nobel Laureate in Chemistry, Member of Israel Academy of Sciences and Humanities, Foreign academician of Chinese Academy of Sciences (CAS), attended via video link the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and giving a keynote presentation.

Avram Hershko, 2004 Nobel Laureate in Chemistry, Member of Israel Academy of Sciences and Humanities, Foreign academician of Chinese Academy of Sciences(CAS), held that basic research is central to all important innovations in the pharmaceutical industry. The remarkable improvement in human health over the past 50 years or so may largely be credited to great innovations in pharmacy, biotechnology and biomedical instrumentation, and major discoveries in the basic biomedical sciences. Yet, in the long run, innovation always relies on advance in basic research. That is, basic research is a long-term social investment in technological innovation. Therefore, to have highly original innovations in the industry, our society should support high-quality basic research.

Zhang Boli, Academician of Chinese Academy of Engineering, Winner of National Honorary Title of "People's Hero" in 2020, attended via video link the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and giving a keynote presentation.

Zhang Boli, Academician of Chinese Academy of Engineering, Winner of National Honorary Title of "People's Hero" in 2020, shared his insights into the modernization of TCM: first, TCM should adhere to the law of development of TCM in its modernization drive, namely, to respect fundamental principles; second, the modernization of TCM must be integrated with modern technology, namely, to make innovations; and third, the modernization of TCM needs to cultivate high-quality talents, namely, to bolster the support systems. Nowadays, with China being in a well-off society in all respects, the intensifying contradiction between the growing demand and insufficient supply of high-quality TCM services has risen over time to be the internal driving force behind the modernization and high-quality development of TCM, while the increased expectation of TCM from international communities and the accelerating foray into TCM by foreign drug R&D forces has provided an external pressure for the modernization and high-quality development of TCM. Under these circumstances, we must implement the strategy of innovation-driven development, lay the solid foundation of "carrying forward the essences of TCM culture, upholding fundamental principles and breaking new ground" and build a new pattern of the modernization and high-quality development of TCM.

Lin Guoqiang, Academician of Chinese Academy of Sciences, Dean of Innovation Research Institute of Traditional Chinese Medicine of Shanghai University of Traditional Chinese Medicine, gave a keynote presentation and participating in the interactive discussion at the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai.

Lin Guoqiang, Academician of Chinese Academy of Sciences, Dean of Innovation Research Institute of Traditional Chinese Medicine of Shanghai University of Traditional Chinese Medicine, pointed out that Japanese Kampo Medication accounts for 90% of the global drug market whereas China's TCM is yet to increase its penetration rate, so we should strengthen and promote efficient and organized scientific research in this aspect, especially higher-level research. As for some rare and endangered medicinal herbals, we should not only find out their alternatives but also cultivate them in a big way, improve them and ensure their medicinal quality. At the same time, we should strengthen multi-discipline research on TCM with chemistry, biology, medicine and other sectors to bring out the full efficacy of TMC so as to continuously improve its awareness in the global market.

Fu Fan, Executive Director and President of CPIC Group, attended the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and giving a keynote presentation.

Fu Fan, Executive Director and President of CPIC Group, said that the insurance industry should seek mutually beneficial results through increased cooperation and openness with other sectors to enhance the efficiency of the comprehensive healthcare industry. As such, it should focus its effort in the following dimensions: first, being anchored on the national strategy, to innovate its development models and galvanize the growth momentum of the comprehensive healthcare industry; second, being orientated to the value of long-term development, to broaden its lines of services and realize the created values in the big health industry; and third, following the "methodology" of seeking win-win results, to keep open and cooperative and enhance the development efficiency and effectiveness of the comprehensive healthcare industry.

Zhou Liang, Host, Secretary of the Party Committee and Chief Editor of Economic Information Daily, addressed the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and giving a keynote presentation.

【Achievement Release】

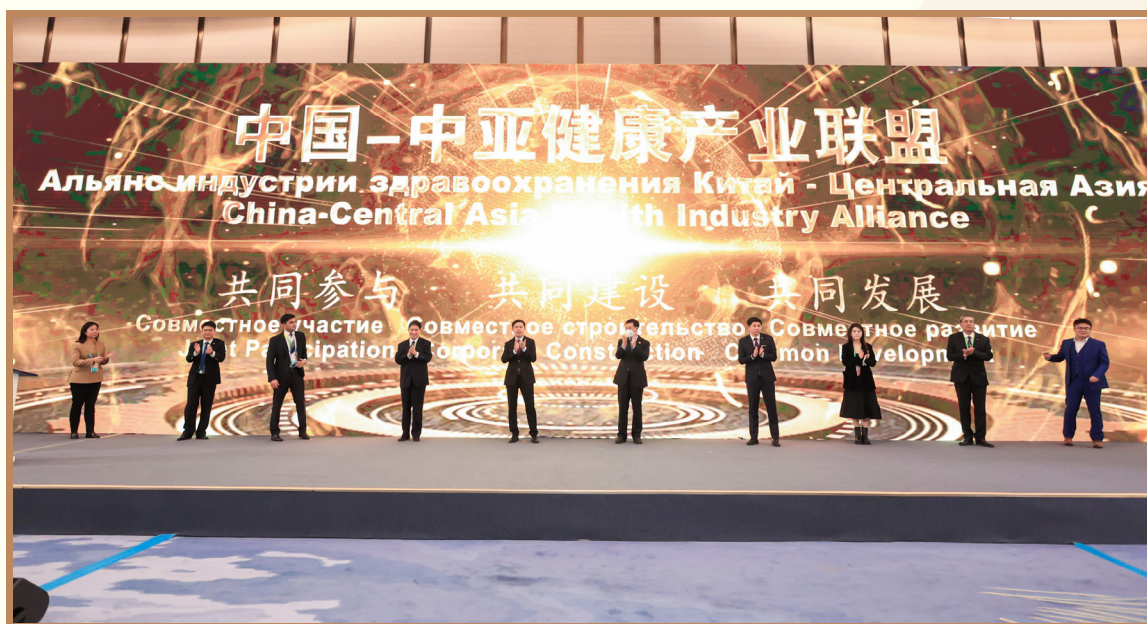

Feng Shizheng, Professor and Dean of School of Sociology and Population Studies of Renmin University of China, attended via video link the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and participating in the achievement release.

Survey Report on the Health Concepts of Urban Youths in China

Focusing on health awareness among young people in China, the survey covers various health-affecting factors, including food, clothing, housing, transportation and medical treatment, and researches the impacts of various health concepts on the lifestyles and behaviors of young people and, further then, on their health status.

【Alliance Establishment】

Bi Jingquan, Vice Chairman of the 13th National Committee of the Chinese People's Political Consultative Conference's Committee on Economic Affairs, Executive Vice Chairman of China Center for International Economic Exchanges, was being joined by representatives from the China Chamber of Commerce for Import and Export of Medicine and Health Products, the Europe-Asia Department of the Ministry of Commerce of the People's Republic of China and diplomatic envoys of Central Asian countries to China at the inauguration ceremony of China-Central Asia Health Industry Alliance.

【Interactive Discussion】

Leon Wang, Executive Vice President of AstraZeneca Group, attended the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and participating in the interactive discussion.

Leon Wang, Executive Vice President of AstraZeneca Group, said that one of the biggest lessons learned from the ongoing epidemic by AstraZeneca is that the global fight against the disease should go beyond national borders, and in particular, the distribution of vaccines should be more oriented towards low-income countries. China has shown stronger resilience in the global supply chain and has made positive contributions to the world's fight against the epidemic. Yet, from other points of view, there is a lot of room for improvement in China, for example, how to ensure some vulnerable people, such as patients under tumor radiotherapy and chemotherapy and patients with blood diseases, hemodialysis and other urgent medical conditions, receive continued treatment while fighting the epidemic. Therefore, as the situation is ebbing back to normal, making normal treatment available to vulnerable people, protecting them from the impacts of the epidemic, and ensuring the sustainable development of serious and chronic disease management will be the main thrust of concerted efforts for both health departments and pharmaceutical enterprises in all countries.

Greg Holman, President of Stryker China, attended the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and participating in the interactive discussion.

Greg Holman, President of Stryker China, said that in China, multinationals can find various excellent partners who can help them make their marks in this vast market, which is boosting the confidence of foreign enterprises to make their heavy investments here. Compared with local enterprises, multinationals tend to be slow in their decision-making, so they should further improve their efficiency, and meanwhile, they also should foster good cooperative relationships. In fact, the two efforts are complementing and reinforcing each other. He added that his group will grasp firmly the opportunities in the Chinese market, not only being set to take root here but also actively promoting TCM to the world.

Kent Bradley, Chief Health and Nutrition Officer of Herbalife Nutrition, attended via video link the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and participating in the interactive discussion.

Kent Bradley, Chief Health and Nutrition Officer of Herbalife Nutrition, gave his opinions via video link at the parallel session, commenting that as nearly 75% of global deaths are estimated to be attributed to non-infectious diseases and prevention and control is much more effective than treatment, so a healthy and positive lifestyle is critical to battling diseases and keeping healthy. As thus, we should do more and better in the following aspects: first, to have more nutritious food; second, to develop the daily habit of doing exercises; third, to have high-quality sleep; and four, to maintain good community interactions and harmonious relationships.

Wu Xiaobin, BeiGene Global President and Chief Operating Officer, attended the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and participating in the interactive discussion.

Wu Xiaobin, BeiGene Global President and Chief Operating Officer, said that, in terms of pharmaceutical R&D, high efficiency is China's biggest advantage. With a large pool of patients, enrollment into clinical trials in China can be done more quickly, which greatly contributes to lower costs and shorter cycles of developing new drugs in pharmaceutical enterprises and, in turn, to the health benefit of the whole body of mankind. Enterprises from all countries should strengthen cooperation in pharmaceutical research and development: working together with each other, learning from each other and complementing each other.

Dechao Michael Yu, Chairman and Chief Executive Officer of Innovent, attended the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai and participating in the interactive discussion.

Dechao Michael Yu, Chairman and Chief Executive Officer of Innovent, said that throughout its development history in the past 10 years, Innovent has played a great role in promoting international cooperation among pharmaceutical multinationals, which has not only provided opportunities to learn new drug R&D experience and global quality standards and requirements with established brands but also has helped established brands make use of China's unique resources to shorten the R&D cycles of innovative drugs.

Wang Xiaobo, Editorial Board member of Economic Information Daily, Director of Xinhua Health Platform, attended the Parallel Session on Promoting Industry High-quality Development and Building a Health Community of Shared Future for Mankind in Shanghai, moderating the achievement release and participating in the interactive discussion.
